## Introduction

The ITAMOrg Hardware Asset Management certification (HAM) syllabus and qualification scheme is designed to provide Hardware Asset Managers, who work in the typically multifaceted computing environment of small/medium to large companies, with the appropriate knowledge to implement and maintain an effective HAM program. The three-day HAM course is designed for IT professionals with little understanding of the IT Asset Management area.

## Learning objectives

Attendees will, after the course, be able to demonstrate an overall understanding of the Hardware Asset Manager's role in relation to:

- Understanding the risks, costs, challenges, and benefits associated with HAM in a dynamic IT environment
- Understanding the different types of hardware that should be managed to avoid risk
- Understand the retirement and disposal lifecycle
- Recognizing the potential issues that arise when implementing a HAM program
- Gathering the required information about the organizational environment into which the HAM program is being implemented
- Developing a comprehensive business case for HAM to gain commitment to the HAM project
- Understanding the key HAM processes required to ensure an effective HAM program
- Specifying the requirements for evaluating and selecting the correct tools for HAM
- Developing and communicating the related hardware policy
- Understanding how HAM interfaces with IT Service Management including ITIL and other BPs
- Planning for the development and implementation of all HAM policies, procedures, and tools
- Establishing and maintaining a database containing the data relevant to HAM
- Understanding how to control all activities associated with the hardware lifecycle
- Detecting, escalating, and managing all exceptions with policies, processes, procedures, and hardware types in the correct way
- Managing all relationships within the business and with partners/suppliers to the agreed service levels
- Continually assessing the effectiveness of policies and procedures in relation to the different tiers

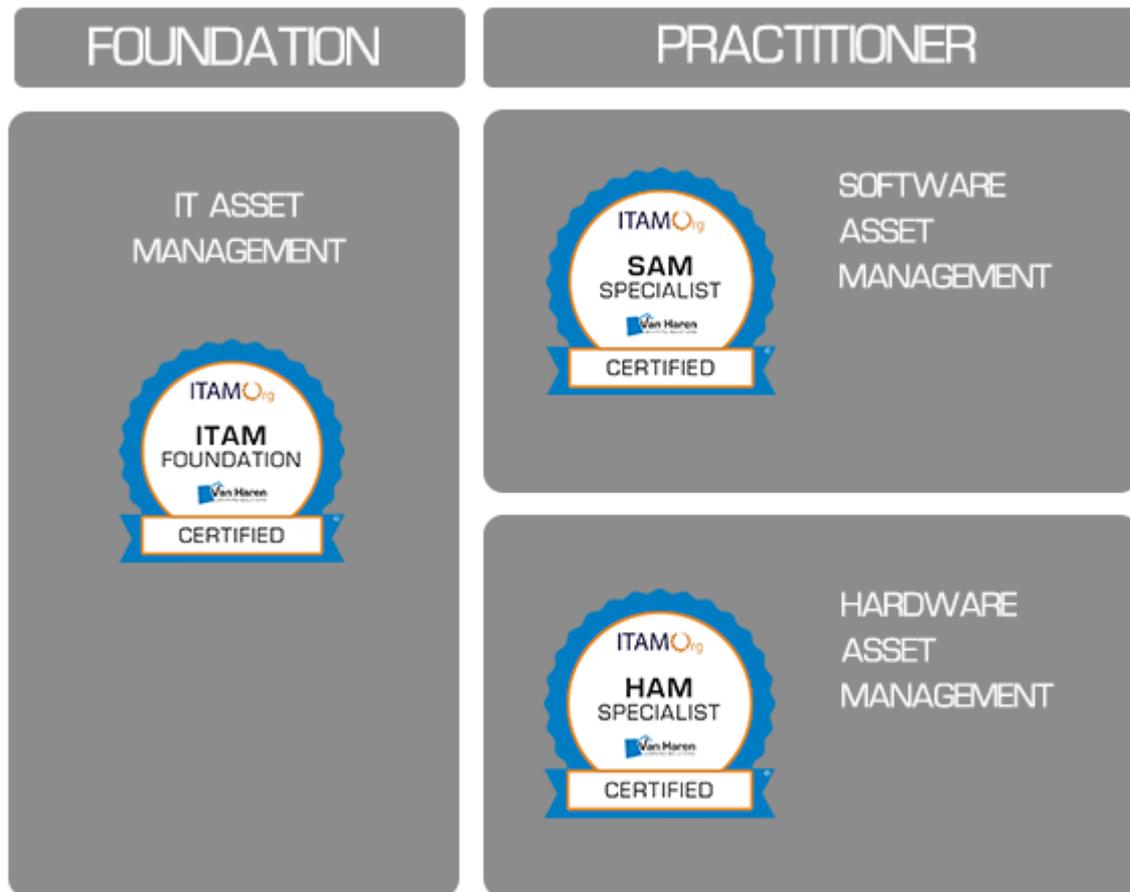

The HAM course is based on Hardware Asset Management best practices and standardization. It combines IT Service Management best practice with the Hardware Asset Management standard (ISO19770).

## Scope certification

The ITAMOrg offers a career path for professionals working in the field of IT Asset Management. This starts with the Foundation certification: ITAMOrg IATM Foundation Certification

There are also two specialist modules for practitioners:

- Software Asset Management Specialist Certification
- Hardware Asset Management Specialist Certification

## The Hardware Asset Management Specialist exam

In order to obtain the Hardware Asset Management Specialist Certificate you first need to have successfully completed the Hardware Asset Management Specialist exam. The exam procedure is explained in the following section.

The examination is a 40 minutes closed book multiple choice consisting of 40 questions.

The pass mark is 65%

The examination will be founded on the syllabus as stated in this document. All examination questions will be drawn from any and all subjects in this syllabus, and the amount of weight allocated to any given topic has to be expected to be in proportion to the given topic's coverage in this syllabus.

### Practical information

You must pass a multiple-choice exam in which your knowledge of Hardware Asset Management will be tested to obtain an Hardware Asset Management Specialist certificate.

All exam candidates will get access to the online exam environment and will need to answer 40 multiple-choice questions within 40 minutes.

You must answer 65% of the questions correctly (or at least 26 of the 40 questions) to pass. Each question includes four possible answers, of which only one is the correct answer.

You will receive the result immediately after the exam. (Digital) Access to your certificate will be given once you have passed.

Registration for the exam can be done by purchasing a participation certificate at [www.vhls.global](http://www.vhls.global).

Time (minutes) for the exam:	40 minutes
% minimal passing grade	65%
Open/closed book:	Closed
Language:	English. See <a href="http://www.vhls.global">http://www.vhls.global</a> for other available languages.
Exam format:	Online
Type of questions:	Multiple-choice
Are there also negative questions included in the exam? (for example: "which of the following is NOT a principle in the Agile Manifesto")	Yes. Candidates are strongly advised to read the questions carefully.
Special abilities and regulations for people with disabilities or non-native English.	Please see: <a href="https://www.vhls.global/examination/exam-regulations/">https://www.vhls.global/examination/exam-regulations/</a>

## Levels

The ITAMOrg ITAM Hardware Asset Management Certification tests candidates at levels 1, 2 and 3, according to the Bloom Revised Taxonomy.

### **Bloom Level 1: Recall & Retention**

We test candidates on their ability to memorize factual information, to retain information by collecting, remembering, and recognizing specific knowledge. Knowledge includes facts, terms, answers, or terminology.

### **Bloom Level 2: Understanding**

We test candidates on their ability to construct meaning from oral, written, or graphical pieces of information. This is done by interpreting, summarizing, distracting, comparing, classifying, predicting, or explaining the message.

### **Bloom Level 3: Apply**

We examine candidates on their ability to resolve issues in new situations by applying acquired knowledge, facts techniques and rules in a different or new way.

## Recommended essentials

The desired – but not required – criteria for participating in the HAM course are:

- ITAMOrg IT Asset Management Foundation course and certification
- At least three months of experience in all phases of Hardware Asset Management
- An understanding of IT Service Management best practice – have participated in ITIL Foundation v. 3 or later and a general understanding of IT.

## Notification to Training Providers

Each major theme heading in this syllabus is assigned an allocated time. This has a two-fold purpose: firstly, to give both guidance on the proportion of time to be allocated, relative to each section of a certified training course and an approximate minimum time to be spent on teaching for each section.

Secondly, to guide how the section is weighted in relation to the number of questions in the exam. The trainer may spend more time than is indicated, if deemed necessary and participants may need to spend more time again in reading and research.

The total time specified is 28 hours for both lectures and practical work such as assignments. The individual courses do not have to follow the same order as the syllabus. The individual courses may be run as a singular module or broken down into two or three smaller modules.

This syllabus is structured into sections relating to major theme headings and numbered with a single character number to define each section. Each section is allocated a minimum contact time for presentation.

## Topics in the Hardware Asset Management Specialist Exam

In this section, you can read about how the Hardware Asset Management Exam is structured and which subjects you will be tested on as a candidate. It is also a tool that you can use to prepare yourself for the exam.

During the exam you will be tested on your general knowledge about:

- Introduction to Hardware Asset Management
- HAM principles
- HAM interfaces
- HAM activities
- HAM implementation
- HAM benefits, costs, problems and risks
- HAM compliance and audits
- Roles and organizational challenges
- HAM business case
- HAM processes and relation to other best practices

### Exam structure

The exam specifications describe the topics in the subject matter of the Hardware Asset Management Specialist exam, and their relative importance. Questions can be asked during the exam about the following subjects.

Module	Subject	% questions in the exam
1.	Key concept of HAM	15%
2.	HAM principles	15%
3.	HAM practices	10%
4.	HAM implementation Tier 1	20%
5.	HAM implementation Tier 2	20%
6.	HAM implementation Tier 3	20%
		100%

In the following sections, you can find more details about what is expected regarding your knowledge of the various topics.

### 1. Introduction

Provides an introduction to the HAM structure and course structure.

### 2. Introduction to HAM

Introduces HAM, HAM principles and the impact of HAM on organizations using it. An appreciation and understanding of the interfaces and dependencies HAM has with other IT and Service Management processes.

On completion of the course, the candidate should be able to:

- Understand the activities involved in HAM

- Understand the development and evolution of HAM
- Describe the need for HAM and explain the principles involved
- Draw up a plan of approach to the implementation of HAM
- Understand the different terminologies and principles used in HAM
- Understand the potential benefits, costs and problems associated with hardware and its usage
- Describe the organizational risks associated with hardware and its usage.
- Describe and explain the special characteristics of hardware assets and hardware types, including financial situations, hardware scope, hardware vendor activities and hardware compliance.
- Review HAM processes, identifying potential areas of weakness
- Describe and explain the hardware supply chain and the role of the organizations involved
- Understand other hardware industry players including standards (ISO/IEC 55000), disposal organizations and HAM partners
- Understand regulations and certificates relating to the disposal of hardware
- Identify and understand the interfaces that HAM has with other IT and Service Management processes
- Understand how IT Service Management best practice will support HAM
- Describe and explain the roles, responsibilities and accountability of the HAM processes and information
- Explain the need for defining and agreeing roles and responsibilities
- Explain the organizational factors that need to be considered when defining roles and responsibilities
- Understand the responsibilities required to carry out specific roles, e.g. hardware audit, reconciliation work and contract management

### 3. The Business case for HAM

Describes the steps involved and the issues involved in preparing a business case for the introduction of HAM within an organization.

On completion of the course the candidate should be able to:

- Describe and explain the need for HAM and the considerations and content of a HAM business case
- Obtain the appropriate information from the business and IT required to produce a HAM business case
- Assist with the production of a HAM business case

### 4. HAM as a practice

Explains the HAM tier-based implementation and process framework, and the scope and content of each tier and the processes and technologies involved within the framework. Introduce the case stories used through the HAM as a practice module.

On completion of the course the candidate should be able to:

- Describe and explain the overall HAM implementation framework
- Identify processes and technologies used in each tier of the implementation
- Describe and explain the stages in the lifecycle of hardware assets
- Describe and explain the HAM process groups and processes contained within the framework and their content
- Describe and explain the management controls, policies and procedures required and their content
- Define and describe the dependencies of other IT and Service Management processes on HAM processes and information
- Define and document the dependencies of HAM on other Service Management processes and information

#### 4.1 Implementation of HAM Tier one

Describes and explains the stages involved in the implementation of HAM within an organisation. Which covers the awareness, knowledge and use of HAM tools and techniques to support HAM processes. The identification and preparation of HAM reports for distribution throughout the organisation as appropriate and the instigation of process improvements.

On completion of the course the candidate should be able to:

- Identify and understand the Management controls, processes and technologies for a Tier one implementation
- Explain and justify the stages and activities involved in the implementation of HAM within an organisation at tier level 1
- Justify and initiate the implementation of HAM within an organisation
- Develop an outline plan for the implementation of HAM within an organisation
- Understand the different resource requirements between project and business as usual activities.
- Explain the types of HAM tools and their usage within the HAM processes at Tier 1
- Understand the evaluation criteria for choosing appropriate HAM tools at Tier 1.
- Justify, select, and procure the appropriate HAM support tools and techniques at Tier 1
- Justify and initiate the identification of HAM asset and get them under control
- Explain the Policies, Procedures & Processes for the HAM framework at Tier 1
- Explain the competences needed in HAM at Tier 1
- Understand and initiate the communication of the policies, procedures, and processes at Tier 1
- Explain and justify how HAM Assets are recorded and how it affects the accurately situation
- Understand how to manage and maintain HAM information
- Identify the HAM related reports required throughout the organisation at Tier 1
- Define and report on the measurements, metrics and Key Performance Indicators (KPIs) of HAM at Tier 1

#### 4.2 Implementation of HAM Tier two

Describes and explains the stages involved in the implementation of HAM within an organisation. Which covers the awareness, knowledge and use of HAM tools and techniques to support HAM processes. The identification and preparation of HAM reports for distribution throughout the organisation as appropriate and the instigation of process improvements.

On completion of the course the candidate should be able to:

- Identify and explain the objective at HAM Tier 2 level and how to establish practical management around HAM
- Identify and understand the Management controls, processes and technologies for a Tier 2 implementation
- Explain and justify the stages and activities involved in the implementation of HAM within an organisation at tier level 2
- Justify and initiate the implementation of HAM within an organisation
- Develop an outline plan for the implementation of HAM within an organisation

- Understand the different resource requirements between project and business as usual activities.
- Explain the types of HAM tools and their usage within the HAM processes at Tier 2.
- Understand the evaluation criteria for choosing appropriate HAM tools at Tier 2.
- Justify, select and procure the appropriate HAM support tools and techniques at Tier 2
- Explain the Policies, Procedures & Processes for the HAM framework at Tier 2
- Explain the competences needed in HAM at Tier 2
- Understand and initiate the communication of the policies, procedures, and processes at Tier 2
- Explain and initiate how optimization and integration to between HAM systems and related systems are enabled at Tier 2
- Explain and initiate how optimization and integration between SAM processes and related processes are enabled at Tier 2
- Understand how to manage and maintain HAM information at Tier 2
- Identify the HAM related reports required throughout the organisation at Tier 2
- Define and report on the measurements, metrics, and Key Performance Indicators (KPIs) of HAM at Tier 2

### 4.3 Implementation of HAM Tier three

Describes and explains the stages involved in the implementation of HAM within an organisation. Which covers the awareness, knowledge and use of HAM tools and techniques to support HAM processes. The identification and preparation of HAM reports for distribution throughout the organisation as appropriate and the instigation of process improvements.

On completion of the course the candidate should be able to:

- Identify and explain the Objective at the Tier 3 on how to create greater efficiency and effectiveness by optimizing cross-cutting contexts, with focus on cost
- Identify and understand the Management controls, processes and technologies for a Tier 3 implementation
- Explain and justify the stages and activities involved in the implementation of HAM within an organisation at tier level 3
- Justify and initiate the implementation of HAM within an organisation at Tier 3
- Develop an outline plan for the implementation of HAM at Tier 3 within an organisation
- Explain the types of HAM tools and their usage within the HAM processes at Tier 3
- Understand the evaluation criteria for choosing appropriate HAM tools at Tier 3.
- Justify, select and procure the appropriate HAM support tools and techniques at Tier 3
- Understand how to manage and maintain HAM information at tier 3
- Justify and initiate how HAM contracts and supplier information must be relevant, realistic, controlled and managed at Tier 3
- Justify and initiate how HAM financials must reflect the current and future situation and be controlled and managed at Tier 3
- Justify and initiate how HAM measure must be aligned with business and HAM operational needs, and must be managed and controlled at Tier 3
- Justify and initiate how HAM operational risks must be managed, controlled and communicated at Tier 3

- Identify the HAM related reports required throughout the organisation at Tier 3
- Define and report on the measurements, metrics and Key Performance Indicators (KPIs) of HAM at Tier 3

## Key terms and concepts

ITAMOrg has established an extensive glossary for the ITAM, SAM and HAM certifications. It's strongly advised to download the glossary via [www.vhls.global](http://www.vhls.global) and study these terms.

However, please note that if you only learn these terms, then you are often not sufficiently prepared to pass the exam.
